Enterprise client
query in, answer out
status stream (SSE)
Supervisor agent
task decomposition, routing, per-node deadlines
orchestration designed as a LangGraph StateGraph
Rotational council
select 4 of 7 models (Eq. 1)
parallel calls with a deadline
score $S_i = \alpha C_i + \beta A_i$ (Eq. 2)
Persistent memory
ChromaDB + MiniLM vectors
inject only if sim. $\geq \tau$ (Eq. 3)
provenance, retention rules
MCP gateway
task-scoped signed tokens
scope and expiry checks
approval for high-risk calls
authorized calls only
MCP servers
Resources / Prompts / Tools
internal records and business APIs
Document parsing service
exposed as an MCP resource
