Enterprise client
query in, answer out
status stream (SSE)
Supervisor agent
task decomposition, routing, per-node deadlines
orchestration designed as a LangGraph StateGraph
Rotational council
select 4 of 7 models (Eq. 1)
parallel calls with deadline
consensus $S_i = \alpha C_i + \beta A_i$
Persistent memory
ChromaDB + MiniLM embeddings
retrieve only if similarity $\geq \tau$
provenance and retention rules
MCP gateway
task-scoped signed tokens
scope and expiry checks
supervisor approval for high risk
authorized calls only
MCP servers
Resources / Prompts / Tools
internal records and business APIs
Document parsing service
MCP resource (e.g. Nemotron-Parse)
not evaluated in this paper
